Parallel Computational Fluid Dynamics 2000: Trends and Applications C. B. Jenssen

Parallel CFD 2000, the Twelfth in an International series of meetings featuring computational fluid dynamics research on parallel computers, was held May 22-25, 2000 in Trondheim, Norway. Following the trend of the past conferences, areas such as numerical schemes and algorithms, tools and environments, load balancing, as well as interdisciplinary topics and various kinds of industrial applications were all well represented in the work presented. In addition, for the first time in the Parallel CFD conference series, the organizing committee chose to draw special attention to certain subject areas by organizing a number of special sessions. We feel the emphasis of the papers presented at the conference reflect the direction of the research within parallel CFD at the beginning of the new millennium. It seems to be a clear tendency towards increased industrial exploitation of parallel CFD. Several presentations also demonstrated how new insight is being achieved from complex simulations, and how powerful parallel computers now make it possible to use CFD within a broader interdisciplinary setting. Obviously, successful application of parallel CFD still rests on the underlying fundamental principles. Therefore, numerical algorithms, development tools, and parallelization techniques are still as important as when parallel CFD was in its infancy. Furthermore, the novel concepts of affordable parallel computing as well as metacomputing show that exciting developments are still taking place. As is often pointed out however, the real power of parallel CFD comes from the combination of all the disciplines involved: Physics, mathematics, and computer science. This is probably one of the principal reasons for the continued popularity of the Parallel CFD Conferences series, as well as the inspiration behind much of the excellent work carried out on the subject. We hope that the papers in this book, both on an individual

From reader reviews:

Esther Ponce:

The book Parallel Computational Fluid Dynamics 2000: Trends and Applications give you a sense of feeling enjoy for your spare time. You can use to make your capable a lot more increase. Book can to be your best friend when you getting pressure or having big problem with your subject. If you can make studying a book Parallel Computational Fluid Dynamics 2000: Trends and Applications being your habit, you can get a lot more advantages, like add your personal capable, increase your knowledge about several or all subjects. You can know everything if you like open up and read a publication Parallel Computational Fluid Dynamics 2000: Trends and Applications. Kinds of book are several. It means that, science book or encyclopedia or other folks. So , how do you think about this book?

Cicely Silber:

Reading a book to get new life style in this yr; every people loves to study a book. When you examine a book you can get a lots of benefit. When you read ebooks, you can improve your knowledge, because book has a lot of information in it. The information that you will get depend on what kinds of book that you have read. If you would like get information about your examine, you can read education books, but if you want to entertain yourself you are able to a fiction books, these us novel, comics, as well as soon. The Parallel Computational Fluid Dynamics 2000: Trends and Applications will give you a new experience in studying a book.

Edward Carroll:

A lot of book has printed but it takes a different approach. You can get it by online on social media. You can choose the best book for you, science, comic, novel, or whatever by means of searching from it. It is identified as of book Parallel Computational Fluid Dynamics 2000: Trends and Applications. You'll be able to your knowledge by it. Without departing the printed book, it might add your knowledge and make a person happier to read. It is most important that, you must aware about e-book. It can bring you from one destination to other place.

Rose Davies:

Reading a reserve make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is composed or printed or created from each source that will filled update of news. With this modern era like today, many ways to get information are available for a person. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Ready to spend your spare time to spread out your book? Or just in search of the Parallel Computational Fluid Dynamics 2000: Trends and Applications when you needed it?
