Particles of The Standard Model: " Fundamental Particles of The Universe " Edited by Paul F. Kisak
The Standard Model of particle physics is a theory concerning the electromagnetic, weak, and strong nuclear interactions, as well as classifying all the subatomic particles known. It was developed throughout the latter half of the 20th century, as a collaborative effort of scientists around the world. The current formulation was finalized in the mid-1970's upon experimental confirmation of the existence of quarks. Since then, discoveries of the top quark (1995), the tau neutrino (2000), and more recently the Higgs boson (2013), have given further credence to the Standard Model. Because of its success in explaining a wide variety of experimental results, the Standard Model is sometimes regarded as a "theory of almost everything". Although the Standard Model is believed to be theoretically self-consistent and has demonstrated huge and continued successes in providing experimental predictions, it does leave some phenomena unexplained and it falls short of being a complete theory of fundamental interactions. It does not incorporate the full theory of gravitation as described by general relativity, or account for the accelerating expansion of the universe (as possibly described by dark energy). The model does not contain any viable dark matter particle that possesses all of the required properties deduced from observational cosmology. It also does not incorporate neutrino oscillations (and their non-zero masses). Library of Congress Control Number: 2015917847

From reader reviews:

Wayne Hause:

The book Particles of The Standard Model: " Fundamental Particles of The Universe " can give more knowledge and also the precise product information about everything you want. Exactly why must we leave the good thing like a book Particles of The Standard Model: " Fundamental Particles of The Universe "? A number of you have a different opinion about book. But one aim that will book can give many details for us. It is absolutely suitable. Right now, try to closer along with your book. Knowledge or details that you take for that, you could give for each other; you may share all of these. Book Particles of The Standard Model: " Fundamental Particles of The Universe " has simple shape but the truth is know: it has great and large function for you. You can seem the enormous world by open and read a publication. So it is very wonderful.

James Sharpton:

Reading a guide can be one of a lot of activity that everyone in the world likes. Do you like reading book thus. There are a lot of reasons why people like it. First reading a reserve will give you a lot of new information. When you read a reserve you will get new information due to the fact book is one of various ways to share the information or even their idea. Second, looking at a book will make a person more imaginative. When you reading a book especially fictional works book the author will bring you to imagine the story how the characters do it anything. Third, you can share your knowledge to other people. When you read this Particles of The Standard Model: " Fundamental Particles of The Universe ", you could tells your family, friends and soon about yours guide. Your knowledge can inspire different ones, make them reading a e-book.

Melanie Pemberton:

Particles of The Standard Model: " Fundamental Particles of The Universe " can be one of your beginner books that are good idea. Many of us recommend that straight away because this book has good vocabulary which could increase your knowledge in language, easy to understand, bit entertaining however delivering the information. The article writer giving his/her effort that will put every word into joy arrangement in writing Particles of The Standard Model: " Fundamental Particles of The Universe " although doesn't forget the main position, giving the reader the hottest as well as based confirm resource details that maybe you can be one among it. This great information can certainly drawn you into completely new stage of crucial contemplating.

Raymond Guajardo:

Reading a book to become new life style in this calendar year; every people loves to read a book. When you study a book you can get a wide range of benefit. When you read textbooks, you can improve your knowledge, since book has a lot of information onto it. The information that you will get depend on what forms of book that you have read. If you need to get information about your analysis, you can read education

books, but if you want to entertain yourself read a fiction books, such us novel, comics, as well as soon. The Particles of The Standard Model: " Fundamental Particles of The Universe " offer you a new experience in reading through a book.
